

Phase-26 — Full loop stress test

- Worlds: outputs/phase26/p26_worlds.csv
Setup Closed-loop controller (rate-limit + deadband) tracks K_ϕ to $K_{\text{mid}}(\omega^2)$. Chaotic perturbations: colored noise on ω^2 and measurement, occasional band shrink, and random velocity bursts. Slip when $|K_{\text{mid}} - K_\phi| \geq f_s \cdot \frac{1}{2} \text{band_width}$ (measured). ## Results
- Overall no-slip rate: **26.0%** (26/100)

target	% no-slip
0.94	38.0
0.98	14.0
