

Phase-27 — Policy sweep & selection

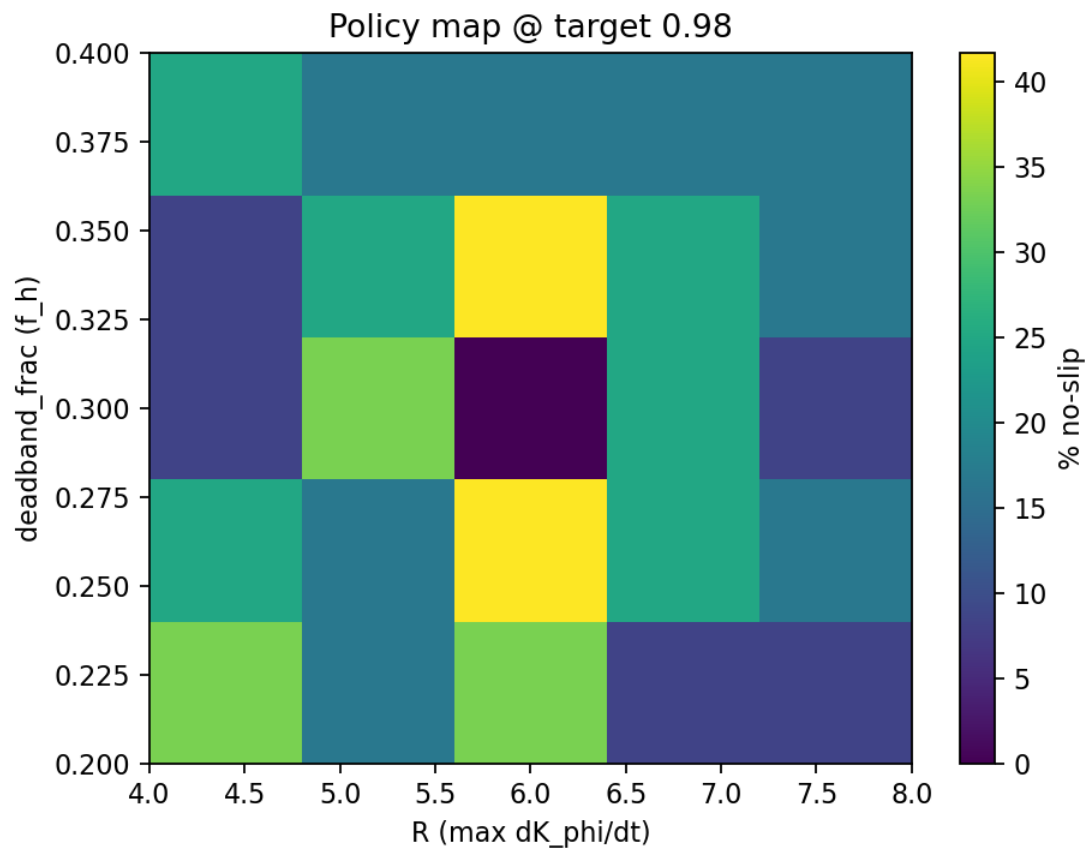

- Policy map: outputs/phase27/p27_policy_map.csv
Closed-loop worlds are simulated for each policy (R, deadband_frac) under chaotic conditions; we report % no-slip across worlds and pick a Pareto-ish recommendation: max % no-slip, then min R, then max deadband (calmer action).

Recommendation

- target: **0.94**
- R: **8.0**
- deadband_frac (f_h): **0.2**
- % no-slip: **66.7%**
- window: $\omega^2 \in [2.74, 2.92]$, $v=0.01$

Heatmaps

Recommendation (table)

Recommended policy

target	R	deadband_frac	pct_no_slip	v	w2_start	w2_end
0.94	8.0	0.2	66.666667	0.01	2.74	2.92
